# NOTICE OF CORRECTION OF ERRORS

With reference to the Tender Specifications document dated 17/01/2023, a clarification is made regarding the mathematical formula for determining the scores:

### On page 23, where it states:

*"Applying discount for purchase or paper and board (In the optional possibility): 7.00%.*

*The bidder will receive the scores arithmetically and proportionally by applying the following mathematical formula.*

*No. of points = 7,00 x (Pi/Pmin)*

*Where: Pmin= The lowest bid (in euros).*

*Pi= The tenderer's bid (in Euros).*

*If any tenderer offers a rate of 0.00€, the maximum number of points for that section will be assigned to that tenderer.*

*Or, those who, by mistake, do not fill in this cell, their bid will be considered to be 0,00€ (therefore free/free for the school)."*

### It should read:

**"…This offer is optional for tenderer. However, tenderer who bid 0,00€ or do not fill in this cell will not be awarded any points in this section. The rest of the tender with entire or decimal values will be assigned the corresponding scores arithmetically using the above formula. That is to say, those that offer a greater discount in euros will receive a higher score."**
